

Prioritization under pressure: Bringing communities to the centre of HIV programme decisions

WEBINAR
16 September 2026

Welcome & Housekeeping

Moderator:
Krista Lauer,
Citizen Science
Lead,
ITPC, Canada

- 90-minute webinar with presentations and two rounds of polls, followed by a panel discussion and Q&A with the audience
- Please type questions in the Q&A box located on the toolbar at the bottom of your screen
- Simultaneous interpretation in French is available on this webinar. To access this feature, please select "More" > "Interpretation" to access the feature.
- If you would prefer to speak, please use the "raise hand" function on the toolbar and we will unmute you so that you have control of your microphone
- Slides and recordings will be shared after the webinar

Webinar objectives

- Explore how communities and people living with HIV can meaningfully participate in and shape HIV programme prioritization decisions.
- Examine how different forms of evidence, including modelling, programme data, community-led monitoring and lived experience, can inform prioritization and difficult trade-offs.
- Consider how tools such as TIER-Plus can support communities and civil society to engage in prioritization processes and strengthen evidence-informed advocacy.

Health, Malawi

Prioritization is happening

How do we
make better
choices?

Prioritization is happening – whether we call it prioritization or not

What do we
protect?

What do we
expand?

What do we
adapt, delay
or reduce?

How are those choices made – and who gets to participate?

Countries asked us the next question

- Estimate outcomes
- Understand costs
- Compare scenarios

A model can inform a decision. It can't make it.

What would you prioritize?

-  Limited resources
-  Multiple effective interventions
-  Not everything can be funded or expanded.

What would you prioritize – and what would you need to know before deciding?

In summary

We have to make choices.

Countries wanted better evidence about the consequences of their choices → TIER-Plus

But modelling is only one part of the evidence
- communities need to be part of the process.

The prioritization scenario – Round 1

TIER-Plus: providing evidence to support HIV service prioritization decisions

PRIORITIZATION UNDER PRESSURE

ALEXANDRA DE NOOY, AMSTERDAM UMC

16 SEPTEMBER 2026

A “what-if” tool for HIV service prioritization and programme decisions

It can be used to consider: **what if Malawi did more of this and less of that?**

It compares choices side by side. It does not make the decision.

2 WHAT IS TIER-PLUS?

RIAS TIER-Plus - HIV Intervention Impact Calculator

Select Regional Profile:

Malawi

Epidemic Parameters
(Start of Year)

Total Population:

22,216,120

HIV Prevalence among people
aged 15+ (%):

7,3

New HIV Acquisitions/Year:

11,757

% of PLHIV Diagnosed:

95,2

% Diagnosed on ART:

95

% on ART Suppressed:

Parameters

TIER-Plus — User Guide

A decision-support tool for trade-off analysis in HIV service planning

What is TIER-Plus

TIER-Plus is a planning tool for national HIV programme stakeholders to support annual budget allocation and resource prioritization decisions. It enables users to model how resource allocation across different HIV interventions—prevention, testing, treatment, and retention—translates into projected changes in key outcomes, including progress toward the 95-95-95 targets, new HIV acquisitions, mortality, and programme costs.

2 Back to our decisions

Not all prevention options can be prioritized at 100% coverage – how do we choose?

Oral PrEP

protect / expand the existing programme

Lenacapavir

introduce long-acting injectable PrEP

VMMC

protect / expand circumcision

Condoms

protect condom programming

You told us what you'd want to know first:

- acquisitions averted
- costs & value for money
- numbers & populations reached
- coverage & unmet need
- acceptability & equity

3 Prevention baseline

Malawi's baseline prevention coverage

 IAS TIER-Plus - HIV Intervention Impact Calculator

[Share feedback](#) dsd@iasociety.org

Select Regional Profile:

Malawi

Epidemic Parameters
(Start of Year)

Total Population:

22,216,120

HIV Prevalence among people
aged 15+ (%):

7,3

New HIV Acquisitions/Year:

% of PLHIV Diagnosed:

95,2

[User Guide](#)

Baseline Coverage

[Scenarios](#)

[Results Comparison](#)

[Parameters](#)

Prevention

Total oral PrEP (all groups):

58,089

Total lenacapavir (all groups):

0

Enter the national totals delivered. Capped at the estimated PrEP-eligible population. Switch to "By group" if you want to set the allocation across FSW/MSM/AGYW/General yourself.

VMMC (annual people) [?](#)

47,890

Condom distribution (condoms
distributed) [?](#)

139,000,000

What if we changed our coverage of prevention services

1

Introduce lenacapavir

Expand coverage of
lenacapavir to 400,000 people

4 WHAT IF WE PRIORITISE DIFFERENTLY?

Building a scenario is just changing the numbers

User Guide

Baseline Coverage

Scenarios

Results Comparison

Parameters

Prevention

Total oral PrEP

Baseline: 58,089

people (all groups)

Scenario 1

58,089

Total lenacapavir

Baseline: 0

people (all groups)

Scenario 1

400,000

VMMC ⓘ

Baseline: 47,890

annual people

Scenario 1

47,890

Condom distribution ⓘ

Baseline: 1.39e+08

condoms distributed

Scenario 1

139,000,000

4 WHAT IF WE PRIORITISE DIFFERENTLY?

Trade-offs between scenarios – health outcomes

Key Epidemiological Outcomes (End of Year)

Baseline	Scenario 1
New Adult Acquisitions: 11,757	New Adult Acquisitions: 11,243 (-514)
New Infant Acquisitions: 1,602	New Infant Acquisitions: 1,602 (0)
HIV-Related Deaths: 13,453	HIV-Related Deaths: 13,453 (0)

Introducing lenacapavir at this level averted 514 new adult HIV acquisitions (-4.4%)

4 WHAT IF WE PRIORITISE DIFFERENTLY?

Trade-offs between scenarios – cost

Cost Analysis

Baseline	
Intervention Costs:	\$51,016,231
ART Provision:	\$83,006,600
Total Program Cost:	\$134,022,831

Scenario 1	
Intervention Costs:	\$66,697,037 (+\$15,680,806)
ART Provision:	\$83,006,600 (\$0)
Total Program Cost:	\$149,703,636 (+\$15,680,805)

... but at a potentially infeasible cost

4 WHAT IF WE PRIORITISE DIFFERENTLY?

Trade-offs between scenarios – cost

Cost Analysis

Baseline

Intervention Costs:

ART Provision:

Total Program Co

If we do not have sufficient budget, the addition of this much lenacapavir may need come at the expense of other prevention options

What if we changed our coverage of prevention services

1

Introduce lenacapavir

Maintain overall number of people on PrEP by switching half of those on oral PrEP to lenacapavir

2

Introduce lenacapavir and reduce other prevention

Decrease oral PrEP, condoms and VMMC until costs are the same as baseline

4 WHAT IF WE PRIORITISE DIFFERENTLY?

Trade-offs between scenarios – cost

Cost Analysis

Baseline	Scenario 1	Scenario 2
Intervention Costs: \$51,016,231	Intervention Costs: \$66,697,037 (+\$15,680,806)	Intervention Costs: \$51,448,720 (+\$432,489)
ART Provision: \$83,006,600	ART Provision: \$83,006,600 (\$0)	ART Provision: \$83,006,600 (\$0)
Total Program Cost: \$134,022,831	Total Program Cost: \$149,703,636 (+\$15,680,805)	Total Program Cost: \$134,455,320 (+\$432,489)

We now have a much smaller budget increase and total costs are similar between baseline and Scenario 2

4 WHAT IF WE PRIORITISE DIFFERENTLY?

Trade-offs between scenarios – health outcomes

Key Epidemiological Outcomes (End of Year)

Baseline	Scenario 1	Scenario 2
New Adult Acquisitions: 11,757	New Adult Acquisitions: 11,243 (-514)	New Adult Acquisitions: 12,580 (+823)
New Infant Acquisitions: 1,602	New Infant Acquisitions: 1,602 (0)	New Infant Acquisitions: 1,602 (0)
HIV-Related Deaths: 13,453	HIV-Related Deaths: 13,453 (0)	HIV-Related Deaths: 13,453 (0)

But health outcomes have worsened

Comparing the trade-offs

Outcomes (relative to baseline)	Scen. A + lenacapavir	Scen B + lenacapavir – oral PrEP – condoms - VMMC
Change in new acquisitions	-514	+823
Change in budget (\$)	+15,680,805	+432,489

TIER-Plus does not tell us what the correct answer is. We could have looked at many combinations of prevention options at different coverage levels.

But, it DOES show the trade-offs between scenarios, letting stakeholders use this information to transparently make decisions or to redesign investment plans.

What information can Tier-Plus provide?

TIER-Plus can help with

- ✓ Highlight current coverage & unmet need within interventions (in countries with validated data)
- ✓ Show trade-offs in health outcomes between scenarios e.g acquisitions averted or gained for prevention interventions
- ✓ Indicate likely cost differences between scenarios
- ✓ Contribute towards discussion and decisions surrounding the value for money of interventions

5 WHAT TIER-PLUS CAN'T TELL YOU

What information can Tier-Plus not provide?

- X One-year horizon** — under-counts long-run benefit — particularly relevant for prevention
- X Constrained interventions** — cannot model every intervention or element of implementation
- X Not the whole picture** — misses acceptability, lived experience and access barriers
- X Not equity or rights** — can't easily weigh who is left behind
- X Not why people choose** — can't tell you why someone prefers one option over another

Communities can use TIER to:

1. Challenge assumptions and ask sharper questions about proposed investments
2. Compare alternative scenarios and advocate for their consideration
3. Have discussions with other stakeholders using the same tool, with the same data and seeing the same outputs.

THE KEY MESSAGE

TIER-Plus can't tell Malawi (or any other country) what to prioritise. It makes the **consequences of each choice visible — so decisions are transparent, evidence-based, and open to challenge.**

Prioritization Under Pressure

From Evidence to Influence

Simon Sikwese

Pakachere Institute of Health and Development Communication

16 September 2026

-
- A dense collage of colorful sticky notes with various handwritten notes, drawings, and reminders. The notes are in various colors including yellow, pink, blue, green, and purple. Some notes have drawings like a lightbulb, a heart, a cloud, a smiley face, and a calendar. The text on the notes includes reminders like "Talk with Marketing Developer", "What's NEXT?", "Thanks for helping me!", "To do list", "Goal!", "BE HAPPY!", "TAX", "MEETING", "IMAGINE", "POSITIVE THINKING", "FOLLOW UP", "NEW IDEA", "CALL", "INTERN STUDENTS", "VDO CONFERENCE", "LOAD!", "FITNESS TRAINER", "NEW PLAN", "POSITIVITY", "MAIL SCHEDULE", "TIME IS", "the BEC", "Hit Target", "DON'T FORGET TO BE YOURSELF!", "LUCK", "BILL PAYMENT", "TAL WITH JOHN", "WORK-UP", "Balance", "DAILY REPORT", "What's NEXT?", "Life is short CHOOSE HAPPINESS", "Strong", "DON'T BE LATE!", "POM BE LATE!", "MAIL SCHEDULE", "TIME IS", "the BEC", "Hit Target", "DON'T FORGET TO BE YOURSELF!", "LUCK", "BILL PAYMENT", "TAL WITH JOHN", "WORK-UP", "Balance", "DAILY REPORT", "What's NEXT?", "Life is short CHOOSE HAPPINESS", "Strong", "DON'T BE LATE!", "POM BE LATE!", "MAIL SCHEDULE", "TIME IS", "the BEC".

Making the Trade-offs

Intervention	Unit Cost Profile	Efficacy & Coverage Characteristics	TIER-Plus Trade-off Projection
Oral PrEP	Low to moderate daily cost	High efficacy if adherent; higher dropout rates over time	Cost-effective for high-risk cohorts Retention challenges, pill burden.
Long-Acting Injectable PrEP (CAB-LA/LEN)	Higher delivery & commodity cost	Very high protection; overcomes daily pill burden	Higher per-person cost yield; High infection reductions per user
VMMC	Higher one-time intervention cost	One-time procedure offering lifetime partial protection (~60%)	Strong long-term cost-effectiveness and sustained population-level impact.
Condoms	Very low per-unit cost	Protects against HIV, STIs, and unintended pregnancy	High volume for low cost, but impact depends on consistent population use.

Making quantitative and qualitative considerations

- TIER-Plus provides critical direction, but community-led advocacy brings a complete picture:
 - **TIER-Plus:** Use to project epidemic trajectory, service expansion, and cost-effectiveness scenarios.
 - **Qualitative Evidence:** Unearth stigma, supply chain bottlenecks, human rights abuses, and healthcare barriers.
 - **Strategic Triangulation:** Using both evidence prevents misallocation of funds and grounds technical models in lived experiences.

Influence and the Power of Coalitions

- Use of existing coalitions to engage with the quantitative and qualitative data to make evidence driven trade-offs
 - CLM Data
 - Other qualitative data
- Use the evidence to influence decisions during Global Fund and other processes
- Tier-Plus is a handy tool to support framing of our ASKS

Influencing decisions: Tier-Plus

Frame the advocacy ASK:

- Translate technical trade-offs into persuasive policy narratives.
- What would be the impact if we increased LEN, reduced oral PrEP, and targeted/prioritized female sex workers for LEN access?

Mobilize:

- Position civil society speakers (CSAF) as technical and community experts.
- Conduct community-backed advocacy campaigns prior to and during country dialogue and resource allocation cycles.
 - Meetings with CCMs to provide evidence
 - Meetings with NACs and key decision makers in the MoHS prior to the decision-making processes

The message

Data must be collected and triangulated before decision making processes commence.

Experience from the GC8 Process

Use of CSAF as a platform to interrogate the evidence and use it to influence decisions

The need for more time to triangulate qualitative and quantitative data from Tier-Plus.

Understanding of data sources used to make decisions

Orient advocates on the use of Tier-Plus tool

The prioritization scenario – Round 2

Round 1 - Poll 1

00:03:32 1 question 84 of 118 (71%) participated

1. If resources were constrained, which HIV prevention investment would you prioritize most highly?
Si les ressources étaient limitées, à quel investissement en matière de prévention du VIH accorderiez-vous la plus grande priorité ? (Single choice)
84/84 (100%) answered

Oral PrEP PrEP par voie orale	(8/84) 10%
Long-acting injectable PrEP (CAB) PrEP injectable à action prolongée (CAB)	(8/84) 10%
Long-acting injectable PrEP (lenacapavir) PrEP injectable à action prolongée (lénacapavir)	(32/84) 38%
Voluntary medical male circumcision (VMMC) Circoncision masculine médicale volontaire (VMMC)	(0/84) 0%
Condom programming and distribution Mise en place de programmes de distribution de préservatifs et distribution de préservatifs	(10/84) 12%
I need more information before deciding J'ai besoin de plus d'informations avant de me décider.	(26/84) 31%

Get QR code

End poll

Round 2 - Poll 1

00:03:58 1 question 70 of 127 (55%) participated

1. Now that you have heard additional evidence and perspectives, which HIV prevention investment would you prioritize most highly?
Maintenant que vous avez pris connaissance d'éléments d'information et de points de vue supplémentaires, à quel type d'investissement en matière de prévention du VIH accorderiez-vous la plus grande priorité ? (Single choice)
70/70 (100%) answered

Oral PrEP PrEP par voie orale	(6/70) 9%
Long-acting injectable PrEP (CAB) PrEP injectable à action prolongée (CAB)	(14/70) 20%
Long-acting injectable PrEP (lenacapavir) PrEP injectable à action prolongée (lénacapavir)	(27/70) 39%
Voluntary medical male circumcision (VMMC) Circoncision masculine médicale volontaire (VMMC)	(1/70) 1%
Condom programming and distribution Mise en place de programmes de distribution de préservatifs et distribution de préservatifs	(11/70) 16%
I need more information before deciding J'ai besoin de plus d'informations avant de me décider.	(11/70) 16%

< Back

Round 1 - Poll 2

00:03:49 | 1 question | 84 of 124 (67%) participated

How many HIV acquisitions each investment could avert
Combien de cas de contamination par le VIH chaque investissement permettrait-il d'éviter ?

Cost of each intervention and/or budget available
Coût de chaque intervention et/ou budget disponible

Value for money / impact for the resources invested
Rapport qualité-prix / impact par rapport aux ressources investies

Number of people who could be reached
Nombre de personnes pouvant être contactées

Which populations and communities would benefit
Quelles populations et quelles communautés en bénéficieraient

Current coverage and unmet need
Couverture actuelle et besoins non satisfaits

Community preferences and acceptability
Préférences et acceptabilité au sein de la communauté

Equity and human rights considerations
Considérations relatives à l'équité et aux droits de l'homme

Feasibility of intervention roll-out/system readiness
Faisabilité du déploiement de l'intervention / état de préparation du système
